Re: AI Engineer application

Dear Hiring Manager,

I am applying for the AI Engineer position at [Company Name]. I am an Algorithms Engineer at Aumovio, where I use Python and C++ to evaluate and integrate automotive perception algorithms. I am also pursuing an M.S. in Computer Science with a focus on Artificial Intelligence. [Add a specific reason for your interest in the company, product, or team.]

In LiDAR perception, I built ground-truth evaluation tools for static-object detection and bounding-box query, with dashboards and reports that helped teams review algorithm performance and customer deliverables. More recently, I redesigned a radar-model validation workflow for General Motors. Automating its data processing and reporting with Python and GitHub Actions reduced a process that had taken about five working days across multiple engineers to 50 minutes.

My AI experience is developing through graduate coursework in machine learning and neural networks, research into hybrid metaheuristics, and integrating LLM-assisted editing into a publishing product. My thesis research explores resource-aware cryptography for IoT using genetic algorithms and simulated annealing. I bring a strong engineering foundation in Python, C++, measurement, and repeatable evaluation, and I am building on it toward applied AI work.

I would welcome the opportunity to contribute my software and evaluation experience to [Company Name] while growing my applied AI expertise. I am based in Queretaro, Mexico, and open to relocation. Thank you for your time and consideration.

Sincerely,

Axel Gomez
