Re: Algorithms Engineer application

Dear Hiring Manager,

I am applying for the Algorithms Engineer position at [Company Name]. I am an Algorithms Engineer at Aumovio with experience across LiDAR perception, C++ algorithm orchestration, and radar-model validation. [Add a specific reason for your interest in the company, product, or team.]

For LiDAR perception, I built ground-truth evaluation frameworks for static-object detection and bounding-box query, then surfaced results in dashboards and customer reports. I also helped establish commit and pull-request checks and two-week integration reviews so teams could assess individual and combined algorithm performance. In my current radar-model project, I automated validation reporting for General Motors, reducing a multi-engineer workflow from about five working days to 50 minutes.

My work combines algorithm evaluation with practical development in Python and C++. I have also migrated legacy C++ orchestration for parallel algorithm flows, built point-cloud visualization features, and worked with eCAL, Linux, and AUTOSAR/MISRA-oriented code-quality practices. These projects have taught me to make algorithm behavior measurable and communicate results clearly across teams.

I would welcome the opportunity to bring my algorithm evaluation, development, and integration experience to [Company Name]. I am based in Queretaro, Mexico, and open to relocation. Thank you for your time and consideration.

Sincerely,

Axel Gomez
