Re: Automation Engineer application

Dear Hiring Manager,

I am applying for the Automation Engineer position at [Company Name]. In my current role at Aumovio, I build Python automation for automotive sensor validation, analysis, and reporting. [Add a specific reason for your interest in the company, product, or team.]

For a radar-model project, I first automated data export, processing, metrics, and reports, reducing a multi-engineer validation workflow from about five working days to one day. I then proposed and migrated the workflow to a new validation architecture, bringing the process to 50 minutes with Python and GitHub Actions for General Motors deliverables. I am now helping extend automated checks to each commit and pull request.

Earlier, I built automated evaluation and reporting for LiDAR perception algorithms, including commit/pull-request checks and dashboards that made performance results available to engineering teams. Outside my full-time role, I built a subscription publishing product that accepts news through a bot, uses LLMs to format submissions in the outlet's editorial style, and publishes or schedules content across its website, Facebook, Instagram, X, and WhatsApp.

I would welcome the opportunity to bring my workflow automation, validation, and reporting experience to [Company Name]. I am based in Queretaro, Mexico, and open to relocation. Thank you for your time and consideration.

Sincerely,

Axel Gomez
