Re: Software Engineer application

Dear Hiring Manager,

I am applying for the Software Engineer position at [Company Name]. I am an Algorithms Engineer at Aumovio, where I develop Python and C++ software for automotive perception and sensor validation. [Add a specific reason for your interest in the company, product, or team.]

My work spans development, integration, and delivery. I migrated legacy C++ orchestration for a camera/radar parking system so algorithm flows could run in parallel and handle per-frame failures. In LiDAR perception, I developed algorithm and point-cloud visualization features and worked with eCAL to connect perception components. I also built Python evaluation tools and dashboards to measure performance and support integration decisions.

I value maintainable software and practical quality controls. My experience includes Linux development, QAC static analysis, and AUTOSAR/MISRA-oriented C++ practices. I also refactored a radar-model validation architecture and automated its reporting with Python and GitHub Actions, reducing a multi-engineer process from about five working days to 50 minutes. In parallel, I maintain a subscription publishing product with LLM-assisted text preparation.

I would welcome the opportunity to contribute my Python/C++ development, integration, and delivery experience to [Company Name]. I am based in Queretaro, Mexico, and open to relocation. Thank you for your time and consideration.

Sincerely,

Axel Gomez
